

01. Making it simple..

You want to make it easy to manage your website(s) and realise the cost savings (without restrictions) that are offered by using the IgnatioCMS product?

You are happy with the design and look of your website so you just need a copy of your site with all of the same pictures and content but with menus that are scalable so that you can grow by adding more Pages, Sections and Menu items yourself.. No Problem!

We have already undertaken this process for one of our clients who has an average sized website which previously had no CMS capabilities. Using this site as an example you should be able to get a rough idea of how long it will take and what it may cost to 'Port' your website into the IgnatioCMS.

Bamboo Revenue's Non-CMS Website:

I need to Port my existing website..

Build-up and maintain your website at low cost, without the need for any specialist IT knowledge or lengthy training.

- 01. Making it simple..
- 02. Styling the Content..
- 03. Populating the Site with Content..
- 04. Delivery Day or Bespoke Development..

www.BambooRevenue.co.uk is a small, successful hotel reservation and revenue management consultancy.

Day 1: Step 1 - Analysis - Bamboo Revenue's Original Website:
Day 1: Step 2 - Building the Architecture of Bamboo Revenue's New IgnatioCMS Website:

We analysed the old layout and configured the IgnatioCMS product to match it. Shown below is the White Label layout with the default Menus, Columns and Structure.

All of the elements contained in this Default layout are either resized, re-positioned or switched on/off to attain the correct Architecture required. **Time Taken - 1 day.**

IgnatioCMS White Label Structure:

02. Styling the Content..

Day 2: Step 3 - We analysed the old site's text sizes, colours, styles and aspect ratios of the images and other content. From this we constructed Paragraphs within the IgnatioCMS to match all of these elements of the content, slightly simplifying the layout at the Client's request.

All of the other specialist content and pages, such as the News and Contact pages, were also configured so that they could be easily amended in the IgnatioCMS.

Time Taken - 1 day.

The new website built with IgnatioCMS:

Building pages with IgnatioCMS:

04. Delivery Day or Bespoke Development..

Day 4: Step 5 - We have many solutions for menu structures that allow you to add as many pages as you like within your website but Bamboo wanted something a bit different.

Bamboo required a 'Flash' based menu system with all of the usual scalability we offer but in their own Corporate Typeface. All of our 'Flash' components are SEO searchable and also get replaced with a 'Fall Back' presentation for those who don't have 'Flash'.

www.bamboorevenue.co.uk

Time Taken on Bespoke Development - 1 day.

Bespoke 'Flash' in IgnatioCMS:

03. Populating the Site with Content..

Day 3: Step 4 - Ignatio's team undertook an initial appraisal with the Client to confirm that the initial 'Port' was as specified and to their satisfaction. Once sign-off had been achieved we then began copying the text and images from the old site into the new site via the IgnatioCMS.

Below you can see 'Site Overview' list where pages are added, deleted or amended and the 'Preview' window. **Time Taken - 1 day.**
